TRAINING UPDATES

Mass Decontamination Training

- To date, hundreds of employees across the network (NYULH – Tisch, NYULH – Brooklyn, NYUL – Orthopedic Hospital, and NYU Langone Cobble Hill) have taken the Awareness Level Hazardous Materials Decontamination Training
 - *Security, Emergency Department, Building Services, Facilities, Environmental Health & Safety, EM+ER*
- Additionally, network employees have taken the Operations Level Hazardous Materials Decontamination Training and can now perform technical decontamination

Mass Decontamination Training – Sentinel PAPRS

Mass Decontamination Training – Sentinel PAPRS

MedSled (FOCUS and Live)

- Standardizing ordering process and placement based on patient populations across the network
- Online staff training provided via FOCUS tool
- Live in-person vendor training provided by MedSled at each network location
- SuperUser all hands model utilized with rolling quarterly training planned

EM  ER

Emergency Management
Enterprise Resilience

EXERCISE UPDATES

Complex Coordinated Attack – Enterprise-wide

Scenario

Tuesday, October 10, 2017, 9:18 am

Suicide bombers use backpack bombs to attack the NYC mass transit system. Explosions occur simultaneously in the midst of the morning rush, bringing the transit system to a halt.

Attack Sites:

- o Subway Train – C Line – outside Wall Street Station
- o Subway Train – A Line – between 125th and 59th Street Stations
- o Transit Station – Atlantic Terminal, Mezzanine Level – Downtown Brooklyn
- o MTA Bus –14A – 14th Street and Park Ave. South, Manhattan

Fatalities: 52+

Casualties: 700+ (including burn injuries)

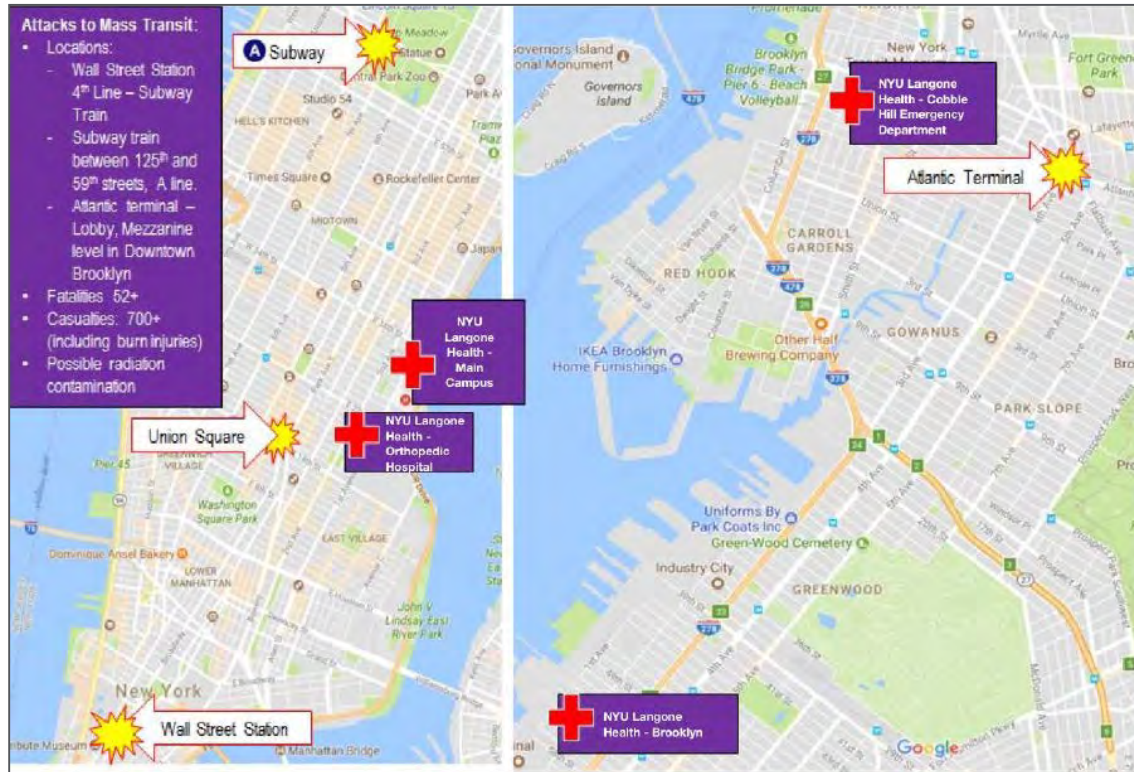

During the first few minutes, FDNY-EMS reports presence of radiation at Wall Street Station.

Objectives:

1. Assess patient triage and decontamination procedures at all network locations
2. Assess notification and activation procedures for mass casualty and mass decontamination incidents
3. Assess the coordinated enterprise-wide response to a complex incident via NYU Langone Health's Incident Command System (NICS)
4. Assess efficiency of information and resource sharing throughout the enterprise

Complex Coordinated Attack – Enterprise-wide

• Wednesday, October 11th and Thursday, October 12th

– **Day 1:** Executive Level Tabletop Exercise to take place on the Main Campus

- **What to Expect:** in-person executive tabletop discussion. A facilitator will lead a high-level, strategic and operations focused discussion exploring how the enterprise would respond and adapt to an attack in NYC

– **Day 2:** Full Scale Exercise to include an influx of patients presenting to enterprise-wide locations

- **What to Expect:** in-person, real-time exercise at each emergency department with actors serving as mock patients who present to multiple ED locations

Complex Coordinated Attack – Enterprise-wide AAR

Major Strengths

Primary Areas for Improvement

The following opportunities for improvement were identified:

- There is a need to review and revised existing MCI, Mass Decontamination, and Contaminated Patient protocols and supporting documents (e.g. Job Action Sheets).
- There is a need for further development of enterprise-wide resource allocation (e.g. transportation, surge space, and staff) procedures
- There is a need to review existing MCI/Mass Decontamination equipment and supplies to ensure correct type and quantity are in place and available.

NOVEMBER 3, 2017

CARF Patient Evacuation Exercises

- Conducted week of November 6th at three different locations on CARF Rehab Units and in Rehab Gyms
- Major Strengths
 - Staff provided information and consistent support to patients throughout the evacuation process
 - Patient Access Teams were able to successfully register all evacuated patients (actors) into the eFINDS online application
 - Use of a multi-disciplinary discharge team ensured all aspects of the patient’s care were reviewed and signed off prior to evacuation
- Areas for Improvement
 - Location of the Patient Access Team mobile registration carts caused congestion in the hallways
 - Patient triage was inconsistent between the morning and afternoon FSEs

CARF Patient Evacuation Exercise

Improvement Plan		
Action	Owner	Deadline
eFINDS		
1. Pre-establish a location for mobile registration carts that does not interfere with patient egress.		
2. Continue to provide eFINDS training to appropriate staff to maintain familiarity with system selections and efficient registration.		
JAS		
1. Review JAS to ensure consistency for evacuation triage (least ill/most ambulatory first, etc.)		
2. Continue to socialize patient evacuation JAS and provide training to appropriate staff.		
Multi-disciplinary Discharge Team		
1. Memorialize the use of a Multi-Disciplinary Discharge Team in JAS.		
Master Floor List		
1. Memorialize the creation and use of a master patient list in the JAS.		
2. Implement the use of the master floor list as an enterprise-wide practice.		

EM + ER
Emergency Management
Enterprise Resilience

THANK YOU

Jacobi/DOHMH

Radiological Exercise

NYC Health + Hospitals
HPP Network Coalitions Grant Deliverable

Jose Suarez

Associate Director, Emergency Department and Admitting
NYC Health + Hospitals/Jacobi

Background

- Deliverable 12 of the current HPP Network Coalitions grant
- DOHMH Joint Functional Exercise held with NYC Health + Hospitals/Jacobi

Planning

- Three planning meetings conducted (Initial, Mid, Final).
- Developed scenario, objectives, scope, and exercise materials.
- Identified exercise leads, external partners and logistical needs.

Participating Organizations

- NYC Health + Hospitals/Jacobi
- NYC Health + Hospitals/Central Office Emergency Management
- NYC Department of Health and Mental Hygiene (DOHMH)
- Assistant Secretary of Preparedness and Response (ASPR)
- Bronx Emergency Preparedness Coalition (BEPC)
- Emergency Medical Services (EMS)
- Fire Department City of New York (FDNY)
- Federal Bureau of Investigation (FBI)
- Empress Ambulance
- Medical Reserve Corp (MRC)

Preparation

- Conducted Controller/Evaluator training meeting.
- Conducted Actor Orientation training utilizing MRC staff as incident patients.

Exercise – November 14, 2017

Scenario

- At approximately 8:00 am on Tuesday, November 14th, an explosion occurred in the Science Lab at Fordham University. The source of the explosion (set off by accident) is believed to be a bomb created by a science student which included a radioactive component, Cesium 137 as per the radioactivity reading from FDNY and the initial NYPD investigation. NYC Health + Hospitals/Jacobi is expected to receive 20 patients, 5 of which are critical and will need both decontamination and trauma care.

Exercise – November 14, 2017

Scenario Modules

- Notification
- Activation
- Response
 - Clinical Assessments
 - Decontamination
 - Family Reunification

Exercise Objectives

Assess Jacobi's ability to:

1. Implement internal notification protocols and activate appropriate response teams and command staff in response to a Mass Casualty Radiological event.
2. Secure designated hospital areas for decontamination and treatment of patients that follow radiological and decontamination guidelines.
3. Follow donning and doffing PPE procedures for radiological and decontamination incident response.

Exercise Objectives

Assess Jacobi's ability to:

- 4.** Appropriately conduct patient triage and follow decontamination techniques.
- 5.** Access trauma patients and determine clinical interventions.
- 6.** Activate and support the Family Support Center in response to a Mass Casualty Radiological event.

Exercise Strengths

- Notifications:
 - FDNY MCI notification via ED Hotline
 - Activation of Jacobi Trauma Team
 - Activation of HICS Team via Send Word
- Decontamination Protocols:
 - Proper donning and doffing
 - Deconned all 20 patients
- Medical Surge:
 - Trauma Coordinator activated surge plans for multiple departments.
- Family Support Center:
 - Social Work staff activated center and managed family support and reunification.

Lessons Learned:

- Notifications:
 - Bells were not heard in all areas.
 - Send Word Now malfunctioned when the second alert went out to all staff.
- Perimeter Control:
 - New Hospital Police staff were unsure of their roles.
- Decontamination:
 - Delay in Clean Team PPE donning.
 - Dirty Team hand-off to clean team.
 - Difficulty hearing and communicating in full PPE.
- Medical Surge:
 - Need for additional staff to be trained in Trauma Coordinator role.
- Family Reunification:
 - Delay in establishing Family Support Center.

Importance of Rad Exercise

- Tested:
 - Radiation identification and treatment protocols.
 - Decontamination protocols.
 - Mass Casualty protocols.
 - Incorporation of new staff response roles.
- Engaged with:
 - Clinicians from multiple departments on patient triage and treatment.
 - FDNY EMS for patient transport
 - NYC DOHMH to identify necessary resources related to Family Reunification as well as worried well surge inject.
- Mobilized and set-up decon staff and equipment with live subjects.

Questions?

Patient Transfers During Emergency Incidents

Nicholas Caputo
Assistant Director
Prehospital Care & Emergency Management

Background

In February 2015 in response to issues that hampered patient evacuation during Hurricanes Irene & Sandy, DOHMH and GNYHA formed a workgroup.

This group consisted of clinicians, emergency managers, health information technology specialists, transfer center leadership, and others from a number of area hospitals and health systems, as well as government agencies and medical transport organizations.

Background

One concern that was noted was that during an evacuation basic clinical and demographic information was not always available to the clinicians and staff.

The goal was to facilitate a process by which all patients have critical clinical and demographic information with them throughout the transport process.

Background

In January of 2016, Kenneth Raske (President, GNYHA) drafted a letter to the hospital CEOs describing the work accomplished thus far and outlining the recommended data elements for inclusion.

PATIENT FACE SHEET: DATA ELEMENTS FOR CONSIDERATION*

PATIENT
FACE SHEET

- Name
- Medical record number/DOH eFINDS Number
- Social Security number
- Sex
- Date of birth
- Address
- Emergency contact information/next of kin
- Primary Care Physician name and phone number
- Parent/guardian information for minors
- Advance Directives, including DNR and Healthcare Proxy
- Insurance information
- Guarantor information
- Activities of Daily Living
- Room and bed number
- Primary diagnosis

**Some elements appear on both this list and the inter-facility transfer form list*

INTER-FACILITY TRANSFER FORM: DATA ELEMENTS FOR CONSIDERATION

DEMOGRAPHIC
INFORMATION

- Name
- Date of birth
- Medical record number/New York State Department of Health (DOH) eFINDS Number
- Height/weight/sex
- Preferred language

PATIENT
INFORMATION

- Mental status
- Personal assistive devices transferred with patient (e.g., glasses or hearing aid)
- Diet information
- Presence of pressure ulcers
- Seizure precautions
- Drug research protocol

TRANSPORT-
RELATED
INFORMATION

- Patient mobility level (ambulatory, wheelchair, non-ambulatory)
- If an ambulance is required, ALS or BLS
- Bariatric
- IV medication requirements during transport
- ECMO or IABP (requires transport team)
- Oxygen requirements (e.g., BiPAP, CPAP)
- Ventilator settings
- Settings/uses of life-saving equipment (e.g., trach)
- Behavioral concerns/safety risks
- Fall risk/restraints
- Hospital bed number at sending end, if known, at receiving facility
- Nurse or physician contact information at sending and receiving facility
- Date and time of departure and arrival with signature lines

CLINICAL
INFORMATION

- Primary diagnosis
- Secondary diagnosis
- Relevant comorbidities
- Most recent vitals
- Current medications, including pain management medications
- Timing and dosage of medications
- Allergies
- Isolation status/presence of infectious disease
- IV access
- Advance Directives, including DNR and Healthcare Proxy
- Transplant list status
- Most recent progress notes

Recommended Face Sheet Data Elements

- ⦿ Patient demographics
- ⦿ MRN/eFINDS number
- ⦿ Emergency contact information
- ⦿ Advance directives
- ⦿ Insurance information
- ⦿ Guarantor information
- ⦿ Activities of daily living
- ⦿ Room and bed number
- ⦿ Primary diagnosis

Recommended Inter-facility Transfer Form Data Elements

- ⦿ Demographic information - Name, DOB, height/weight, MRN.
- ⦿ Patient information - Mental status, Diet information, Presence of pressure ulcers.
- ⦿ Transport information - Mobility level, ambulance needs, oxygen, ventilator settings, behavioral concerns, fall risks.
- ⦿ Clinical information - Diagnosis, comorbidities, vitals, medications, allergies, isolation precaution, advance directives, most recent progress notes.

MediSys Emergency Transfer Data Workgroup

Initial meeting in Spring of 2016 and met bi-weekly with representatives Jamaica and Flushing Hospitals:

- ⦿ Emergency Management
- ⦿ Nursing Leadership
- ⦿ Department of Medicine
- ⦿ Information Technology/EPIC Team

MediSys Emergency Transfer Data Workgroup

Eventually the group grew to include clinical and administrative leads from:

- ⦿ Medicine
- ⦿ Cardiology
- ⦿ Surgery
- ⦿ OB/GYN
- ⦿ Emergency Medicine
- ⦿ Health Information Management
- ⦿ Admitting
- ⦿ Safety
- ⦿ Transportation Coordination

Current Process Flow for Transfers:

1. Need for transfer identified (Resident)
2. Case presented to Attending Physician for approval (Resident)
3. Receiving facility identified (Attending)
4. Receiving facility contacted and case presented (Attending)
5. Insurance authorization received (Case Management)
6. Consent obtained from patient/family (Resident)
7. Discharge notes added (Resident)
8. Medication reconciliation (Resident)

Current Process Flow for Transfers:

9. Discharge notes and action plan review and approved (Attending)
10. Receiving facility coordination (bed availability, transfer timing, etc.) (Social Work)
11. Personal property/valuables retrieved (Floor Nurse)
12. Transfer request generated or coordinated with receiving hospital (Case Management)
13. Ambulance arranged (Transportation Coordination Center)
14. Chart review and final signoff (Nursing Supervisor)
15. Patient transported

Current System Concerns during an Emergency Situation

- ⦿ Emergencies ALWAYS seem to happen at 2am on a Sunday.
- ⦿ Many of the required departments are not fully staffed 24/7.
- ⦿ Availability of clinical resources during an emergency that can be dedicated to EHR input.

Development

- ⦿ Critical analysis of the current system to meet recommendations from the DOHMH and GNYHA workgroup.
- ⦿ Ultimately we were partially successful.
- ⦿ The existing process remained largely intact however an “Emergency Evacuation” button was added to the discharge navigator which would bypass the various hard stops in the system.

Emergency Evacuation Transfer Record

Challenges with the Proposed Process

- ⦿ Proper utilization of the “Emergency Evacuation” button.
- ⦿ Maintaining training competence especially during a high stress event.
- ⦿ Negotiations with various departments regarding inclusion of criteria.
- ⦿ Availability of printer resources.

Final Process

- ⦿ Need to evacuate patients identified.
- ⦿ Incident Commander or Logistics Section Chief contacts IT support and authorizes activation of Emergency Evacuation button.
- ⦿ Command Center will coordinate with city agencies to determine patient disposition.
- ⦿ A staff member from each service will be identified with the sole responsibility of EHR management.
- ⦿ That staff member will be tasked with coordinating with the Clinical Nurse Manager to ensure the transfer packet stays with the patient.

Advantages to Final Process

- ⦿ A simple tip sheet is available to the clinician on their “nursing communication” dashboard for review.
- ⦿ Many of the screens remain identical to current process.
- ⦿ EHR remains available to hospital staff after transport is completed to allow remote access, if needed.

Functional Exercise

Conducted July 28, 2017

Scenario was a broken water pipe affecting power in the Jamaica Hospital MICU necessitating evacuation of 7 critical patients.

Lessons Learned

- ⦿ Ability to provide just in time training to staff.
- ⦿ Ability to utilize an alternate clinical or non-clinical resource to generate transfer order.
- ⦿ Adjusting time frame captured in the transfer packet.
- ⦿ Printer capabilities (complex patient being 100+ pages).
- ⦿ Consideration for alternate method of data sharing (i.e., USB drive or CD) while maintaining HIPAA compliance.

HICS Organization and Staffing

The screenshot displays the HICS Incident Command Structure (ICS) interface. At the top, navigation tabs include Event Log, Event Overview, Participants, Contacts, Beds, ICS (selected), JAS, and Notification. Below the tabs, the 'Incident Command Structure (ICS)' section shows the Facility as 'LP North Hospital' and the Hazard as '*Severe Weather'. Action buttons for Print, Activate, and Edit ICS are visible.

The ICS structure is organized into several roles, each with a list of staffing options:

- Incident Commander:** Beano, Cheryl
- Public Information Officer:** Bartlett, Robert
- Safety Officer:** LeBlanc-ICS, Brian; Sievers, Fred J
- Liaison Officer:** Bateman, Thomas
 - MCAS EOC Liaison: [Click to Assign User\(s\)](#)

DOING MORESM

Mount Sinai Health System Emergency Management Partnership

Coalition Leadership Presentation

May 8, 2018

**Mount
Sinai**

Agenda

- I. MSHS CMS Compliance Process
- II. MSHS Risk Assessment
- III. MSHS Internal Fire Preparedness
- IV. Ambulatory Services Coordination
- V. Next Steps

CMS Compliance

Project Overview

□ 5 Strategic Priorities

Project Management

- ❑ **Collaboration with Clinical Operations Project Management to develop comprehensive project plan**
- ❑ **Project Management Phases:**
 - Phase 1-Develop & Refine
 - Phase 2-Finalize & Approve
 - Phase 3-Implement & Track
 - Phase 4-Audit and Compliance Tracking

Project Stakeholders

System Executive Sponsor: Senior Vice President, Medical Affairs & Deputy Chief Medical Officer

Executive Steering Committee: Hospital COOs, Ambulatory Services Leadership, & Health System Emergency Management Leadership

Project Management Team: Emergency Management Senior Planning Coordinator, Clinical Operations Project Management

CMS CoP Emergency Preparedness SMEs: Hospital and Health System Leadership from the following areas:

- Ambulatory Services
- Regulatory
- Emergency Management
- Engineering
- Human Resources
- Information Technology
- Infrastructure
- Marketing & Communications
- Population Health

Implementation

- ❑ **71 total project deliverables completed across 10 Critical Components**
- ❑ **Development and refinement of the following:**
 - Hospital Emergency Operations Plan Template
 - Ambulatory Facility Emergency Operations Plan Template
 - Communications Plan Template
 - Approximately 20 Policies and Procedures
 - Centralized Policy and Procedure Repository

Risk Assessment

Risk Assessment Planning

FOR OFFICIAL USE ONLY (FOUO) – DO NOT DISTRIBUTE

Mount Sinai

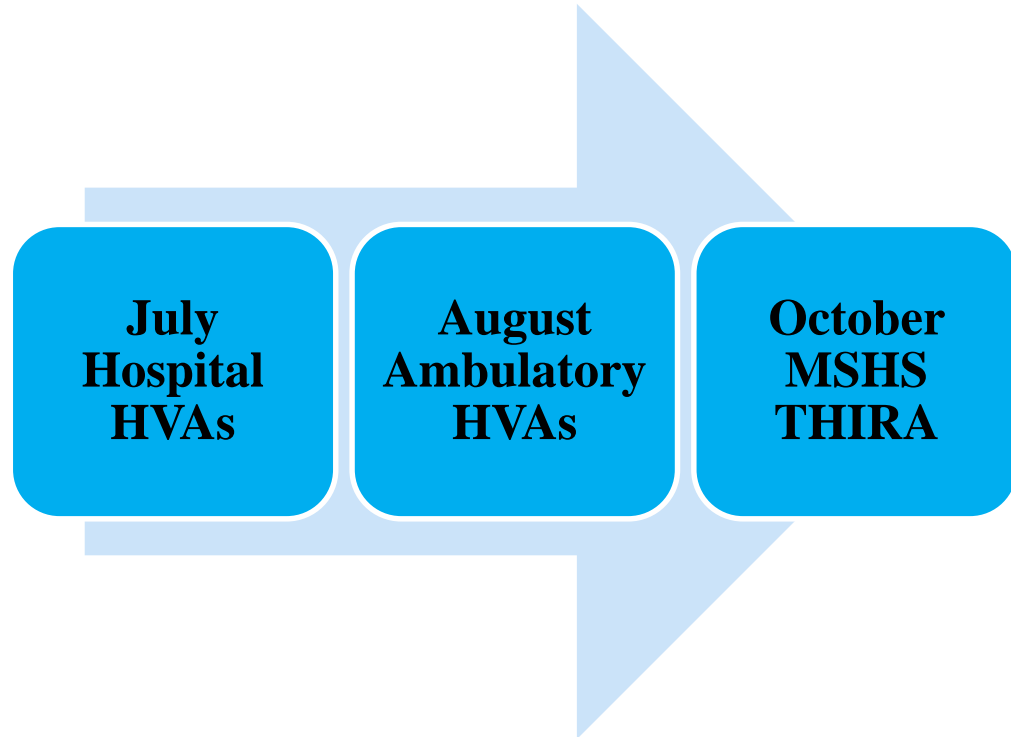

Threat and Hazard Identification Risk Assessment (THIRA)

November 15
2017

This document provides an overview of assessed hazard risks and their associated impact on the Mount Sinai Health System (MSHS). The analysis concatenates existing site specific Hazard Vulnerability Assessments (HVA) and evaluates the collected data by expounding on elements evaluated in the assessment process with integration into the overall MSHS community.

Assessment Period
July 1st, 2016 –
June 30th, 2017

BASELINE REPORT

Aggregated Risk-Hospitals & Ambulatory

	2017 Hazard/Risk/Threat	
RANK	Hospital Campuses	Ambulatory Facilities
1	Fire: Internal	Fire: Internal
2	Workplace Violence Threat	Flood: Internal
3	Security Event: Armed Intruder	Weather: Blizzard
4	Patient Surge	IT Outage: Applications
5	IT Outage: Infrastructure	Security Event: Armed Intruder
6	Weather: Blizzard	Workplace Violence Threat
7	Mass Casualty Incident	Security Event: Bomb Threat
8	Flood: Internal	Utility: Telecommunications Failure
9	Utility: Telecommunications Failure	Weather: Hurricane
10	IT Outage: Applications	Weather: Temperature Extremes

Internal Fire Preparedness

Internal Fire Tabletop Exercise Overview

- ❑ Internal fire joint tabletop exercise on June 16, 2017
 - Based on review of 2016 HVAs and threat and hazard identification and risk assessment (THIRA), as well as 2016-2017 actual experience
 - All seven hospital campuses and two ambulatory care sites participated
- ❑ Leading up to site-specific full-scale exercises in Fall 2017
 - Designed and conducted to support hospitals' and ambulatory facilities' compliance with CMS and Joint Commission emergency preparedness requirements
 - Test policies, plans and training
- ❑ Tabletop exercise components
 - Module 1 – Incident Recognition & Initial Response Actions
 - Module 2 – FDNY Expectations & Coordination
 - Module 3 – Incident Management Team Operations & Escalation

Tabletop Exercise Participants = 97

Tabletop Exercise Successes

- ❑ Having FDNY participate was extremely positive and beneficial
- ❑ For most hospital sites, participants effectively . . .
 - Escalated notification and transmitted situational awareness updates to the Incident Management Team
 - Demonstrated steps that on-scene staff must execute in an escalating fire or smoke condition situation
- ❑ Hospital sites were able to identify steps for coordinating patient evacuation, including assessing availability and use of assets and resources
 - Life-saving medical equipment
 - Evacuation equipment
 - External assistance
- ❑ Most hospital sites were able to discuss command, communication and coordination between the Hospital Command Center (HCC) and the FDNY Command Post

Tabletop Exercise Areas for Improvement

1. Do not delay notifying FDNY
 - MSHS Fire Safety to emphasize in all staff training
2. Confirmed fire or smoke condition situation → Activate Incident Management Team Huddle
 - Emergency Management to review with IMT and telecommunications operators providing fire notifications
3. Develop a process to provide FDNY with internal hospital communications capabilities
 - MSHS Fire Safety to develop radio distribution capability
4. Consider identifying and staffing ICS position capable of decision-making at the Interagency Command Post
 - Emergency Management to incorporate into IMT training

Internal Fire Full Scale Exercises Overview

10/27/2017	Mount Sinai Saint Luke's	Cardiac Critical Care Unit
11/01/2017	Mount Sinai Brooklyn	Medicine/Surgical Unit
11/02/2017	Mount Sinai West	Medicine/Surgical Unit
11/08/2017	New York Eye and Ear Institute of Mount Sinai	Perioperative Suite
11/08/2017	Mount Sinai Hospital	Medical Intensive Care Unit
11/09/2017	Mount Sinai Queens	Intensive Care Unit
11/22/2017	Mount Sinai Beth Israel	Perioperative Suite

Full Scale Exercises Operational Strengths

1. Throughout the Health System the Hospital Incident Management Teams are maturing in their ability to assess the impact of an incident and determine the necessary actions to coordinate activities within their facility.
2. It was noted in all of the exercises that the interaction with the Fire Department of New York (FDNY) Chiefs provided a valuable learning experience and exchange of operational procedures.
 - FDNY stressed to Hospital Leadership the importance of providing pre-arrival information so that the FDNY can dispatch the appropriate resources
 - FDNY discussed the importance of terminology regarding patients versus victims
3. Facility staff are aware of the location of the medical gas shut-off valves

Full Scale Exercises Areas for Improvement

1. Reiterate the requirement to notify 911 in addition to pulling the Fire Alarm
2. Assign a representative to Fire Department Command Post with decision making capabilities
 - The FDNY is also examining the feasibility of assigning a Battalion Chief to the Hospital Command Center to assist with coordination
3. Hospitals should conduct an assessment to determine the need for additional evacuation devices
7. Develop a means to account for staff and patients
8. Hospitals should evaluate the feasibility of developing an Evacuation Matrix that pre-identifies options for the relocation of patients with similar clinical capabilities.
9. Enhance the coordination with Ambulatory Operations in future exercises
10. Educate staff regarding the difference in terminology regarding patients versus victims

Variation in Exercise Structure

NYEEI of Mount Sinai Exercise included the following with Perioperative Staff:

❑ Training:

- Life Safety Familiarization
- Fire extinguisher training on PASS (Pull-Aim-Squeeze-Sweep)
- MedSled Evacuation Training

❑ Drill:

- Hands On Utilization of Fire Extinguisher via Simulator
- Hands On MedSled Evacuation

❑ Functional Exercise

- Incident Management Team reacted to a Internal Fire Scenario in the Perioperative area

Privileged & Confidential: Prepared in accordance with NY State Public Health Law 2805 j through m; NY State Education Law 6527; & Federal Law 109-4.

Ambulatory Services Coordination

Governance: Ambulatory Services

Emergency Management Subcommittee

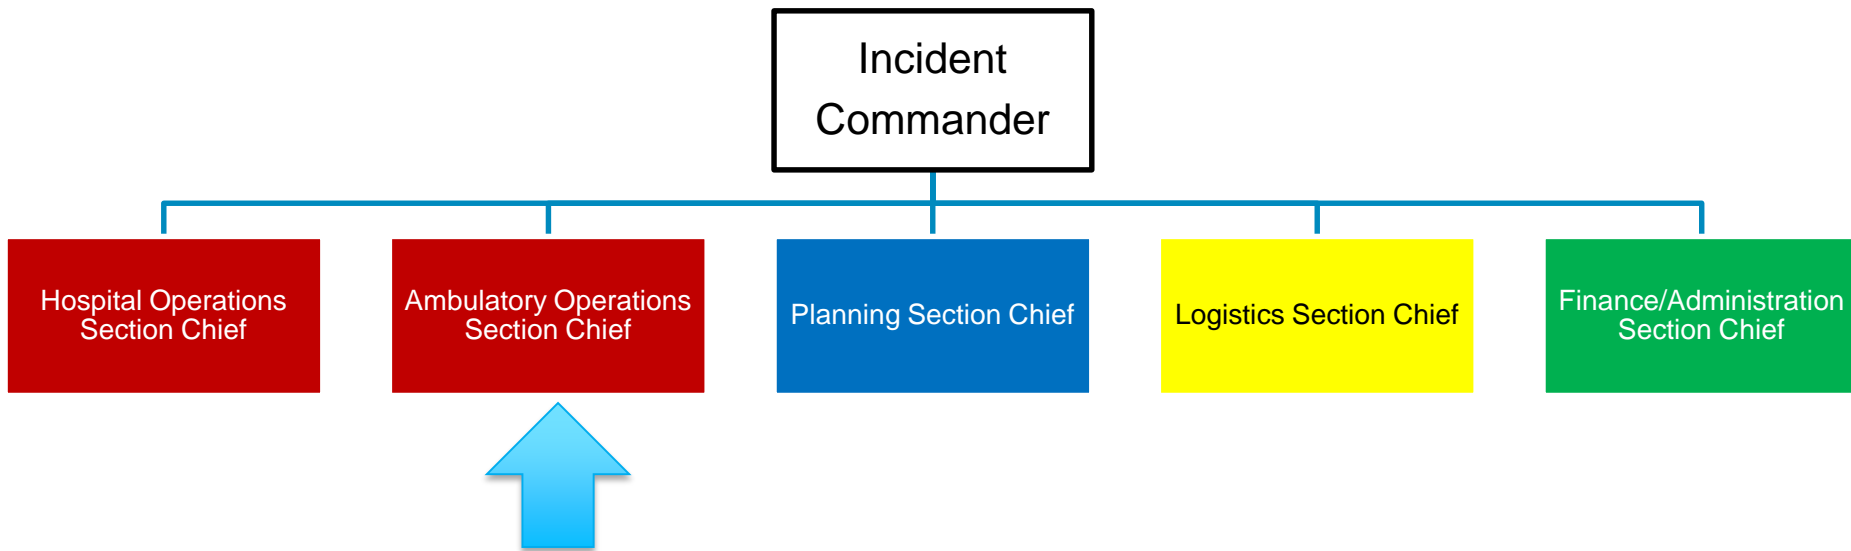

□ Ambulatory Services 2018 Goals

- CMS Compliance for CMS Facilities
- CMS Compliance for Non-CMS Facilities
- Develop and maintain an accurate MSHS Facility Catalog
- Develop a process for Ambulatory Services Situational Awareness

□ Ambulatory Services Practice Prioritization

- Formalizing process for obtaining Situational Awareness
- Develop a comprehensive and organized process to collect data from the practice level
- All-hazards practice prioritization planning
- Facility catalog expansion and validation through internal stakeholder collaboration

Next Steps

CMS Regulations & System Training Overview

Northwell Health

Glenn Schaefering
Operations Manager – Corporate
Emergency Management

May 8, 2018

Timeline for Compliance

09/16/16 – CMS Conditions of Participation are released

11/15/17 – CMS Conditions of Participation become effective

Covered Entities

- Hospitals
- Home Care
- Hospice
- Long-Term Care
- Dialysis
- Ambulatory Surgery Centers
- Transplant Centers
- Rehabilitation Facilities
- Organ Procurement Organizations

Overarching Competencies

- Recognize an event (real or potential) and implement critical and/or initial actions
- Make appropriate notifications
- Respond / Protect (Safety)
- Know their role (Understanding basic ICS & EOP)
- Demonstrate the knowledge and skills needed for their role

Five Levels of Training

- **Basic Awareness**
 - Support Services / Non-Clinical Employees
- **Receivers / First Responders**
 - Clinical Frontline Staff (20,197)
- **Basic Operations**
 - Middle Managers (1,675)
- **Leadership**
 - Site Executives, site EPCs (145)
- **Incident Management Team**
 - IMAT Members, Senior Leadership (44)

Compliance Challenges

- Training Requirements
 - What is the easiest way to train 65,000+ employees?
 - How do we track completion?
 - How do we track employees working multiple facilities?
 - Ramifications of non-compliance?

Plan for Compliance

- Established pre-employment Emergency Management training program for all new hires
- Established a mandatory training program for all system employees
- Established mandatory site specific training for all new hires (30 minutes)
- Identify advanced training for certain employees (Levels 2 & 3 – 21,872)

Plan for Compliance

- Establish mandatory training for Level 4 & 5 employees (189)
 - Establish Command Center Operations class
 - 8-Hour program for leadership
 - Emergency Management background
 - Hospital Incident Command System
 - HICS Activations and the EOP
 - Hospital Incident Action Planning
 - Risk Communications
 - Command Center Logistics
 - Tabletop Exercise

NYC Training Statistics

NORTHWELL HEALTH TRAINING STATISTICS		
	MANDATORY TOPICS	DAY 2 SITE ORIENTATION
COHEN CHILDREN'S HOSPITAL	1,352	76
LENOX HILL HOSPITAL	3,737	551
LONG ISLAND JEWISH HOSPITAL	4,570	152
LONG ISLAND JEWISH - FOREST HILLS HOSPITAL	1,287	145
STATEN ISLAND NORTH & SOUTH HOSPITALS	4,095	206
TOTAL EMPLOYEES TRAINED	15,041	1,130

Training Cost for Compliance

- Mandatory Topics for Existing NYC Employees
15,041 NYC employees x 1 hour to complete
x \$25.00 per hour = \$376,025
- Mandatory Training for All New Employees
(Completion of Pre-Hire Module and Day 2
Site Orientation)
16,171 NYC employees x 1.5 hours to complete
x \$25.00 per hour = \$606,413

Cost for Compliance

- Our estimate would be a total cost of \$982,438 for all new and current NYC employees that have completed the mandatory training for 2017/2018.
- These figures do not reflect 100% of the total NYC employees, as all facilities have a small percentage of employees that have yet to complete the training.
- While not fully calculated due to ever-fluctuating numbers, we estimate a total cost of close to \$4,000,000 system-wide to train all of our 66,000+ employees at these two lower levels alone.

Next Steps

- Finalize & review Level 2 & 3 training modules for fall 2018 rollout
- Finalize Level 4 & 5 training curriculum and schedule classes as necessary
- Work with facilities to track and monitor compliance for training and education pieces
 - EPCs, Nursing Education, HR, Finance

NYP Active Shooter Program

March 2018

Emergency Management

■ Who Do We Plan For?

- Patient, Visitor, and Staff Safety
- Community Safety
- Regulatory requirements – CMS, TJC, etc.

■ How Do We Plan?

- All Hazards Planning
- Emergency Operations Plans, Evacuation Plans, HVAs, etc.
 - Workplace Violence/Active Shooter has been a top vulnerability for the past couple years

As identified in each campus HVA, the following table represents the top threats to NewYork-Presbyterian.

NewYork-Presbyterian Hospital
Cyber Terrorism
Severe Weather Event
Workplace Violence

BACKGROUND

DE-ESCALATION

TRAINING

RESPONSE

DETERRENENTS

QUESTIONS

De-escalation

- Security Officers: MOAB Management of Aggressive Behavior training yearly
- Nursing staff: CPI Crisis Prevention Intervention training yearly
- Physicians: a detailed/specific training from Security Management
- All other staff: a general de-escalation training video created by Emergency Management on the learning center

BACKGROUND

DE-ESCALATION

TRAINING

RESPONSE

DETERRENTS

QUESTIONS

Training

- Minimum 3 in-patient unit drills a year
 - Additional upon request
- In-services on every unit
- Active Shooter Workshops
- Annual Hospital Training – required by all staff

BACKGROUND

DE-ESCALATION

TRAINING

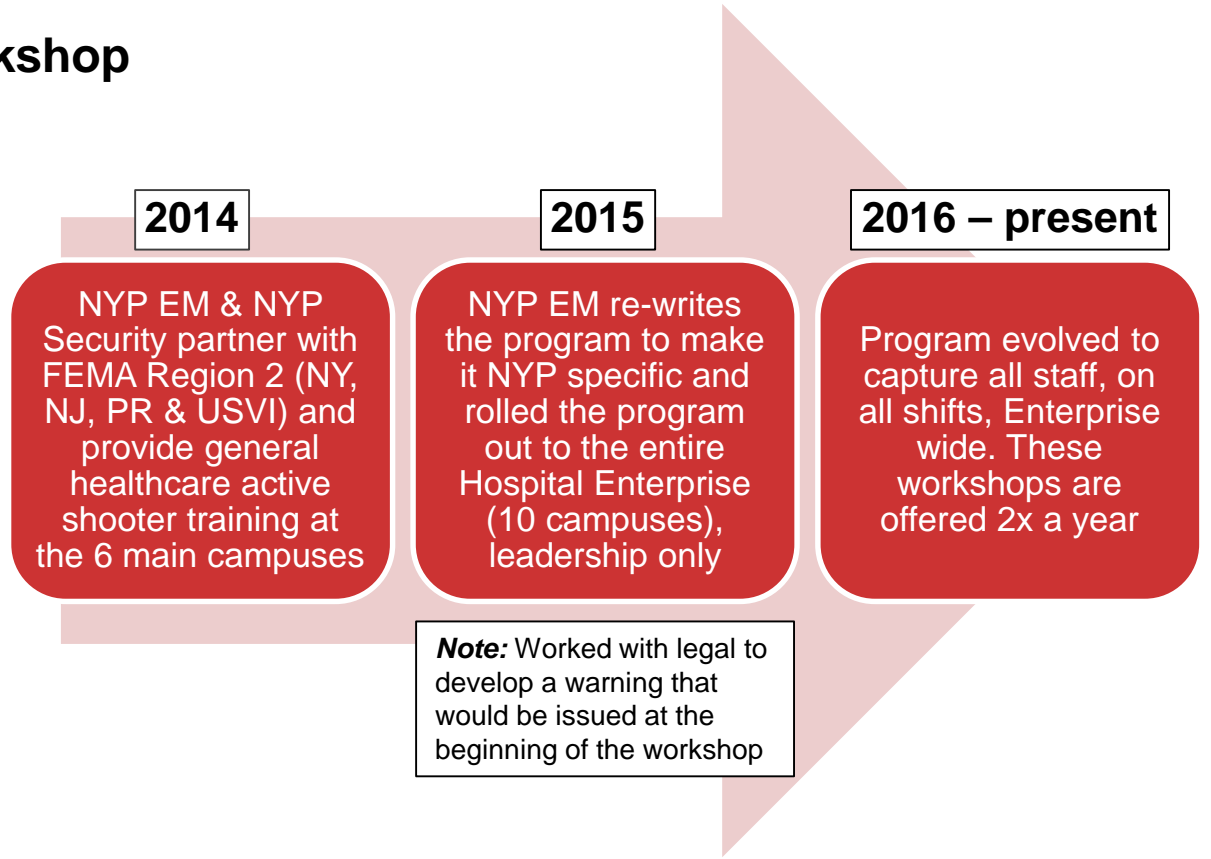

RESPONSE

DETERRENENTS

QUESTIONS

NYP Active Shooter Workshop

- The workshops are facilitated by members of Security management and assisted by Emergency Management
- Educates and Empowers staff on how to handle an incident

BACKGROUND	DE-ESCALATION	TRAINING	RESPONSE	DETERRENTS	QUESTIONS
------------	---------------	----------	----------	------------	-----------

NYP Active Shooter Workshop

- Review the ABCs of Active Shooter Defense
- Learn how to shelter in place using everyday office supplies
- Role play potential Active Shooter situations
- Ask experts questions regarding Active Shooter protocol
- Schedule unit-specific Active Shooter in-services

**MODULE ONE:
Initial Event**

For Internal NewYork-Presbyterian Use Only

Pre-Incident Activity October, 2017

- John D. starts driving routes into and out of New York City in small box trucks that he rents from several different dealers. He is stopped multiple times by Port Authority Police at the Port Authority Bridges and Tunnels for random checks.
- Some officers notice a pattern and notify their Commanding Officer, who in turn checks with other Law Enforcement agencies, but no other information is available.
- During his practice drives he crosses several Boroughs and travels into Westchester County.

QUESTIONS

Stop The Bleed

- In 2017 we added Stop The Bleed training for our Security Departments at the main campuses and have continued to roll the program out to the Regional Hospital's Security Departments.
- During this same time period NYP/WC's Trauma Services has been training hundreds of Hospital employees to Stop The Bleed and save a life.

Deterrents

- Constantly looking at new ways to deter people from causing harm to our patients, visitors and staff
 - Security at every access post
 - Security patrols
 - Special attention rounding based off threats
