Format	Oral Presentation
Abstract	Background:
	Children are frequently victims of disasters. However, gaps remain in
	disaster planning for pediatric patients. The New York City Pediatric
	Disaster Coalition (NYCPDC) is funded by the NYC Department of
	Health and Mental Hygiene (DOHMH) to prepare NYC for mass casualty
	incidents that involve large numbers of pediatric victims. On April 26,
	2018, the PDC conducted a first in NYC, full-scale exercise with the NYC
	Fire Department testing evacuation, patient tracking, communications,
	and emergency response of the obstetrics, newborn and neonatal units
	at one hospital in NYC. The goal of the exercise was to evaluate
	hospital obstetric/newborn/neonatal plans and assess the ability to
	evacuate patients during an emergency situation.
	Church Courselieur
	Study Question: Will a full-scale evacuation exercise of an obstetric/newborn/neonatal
	unit identify current gaps and provide lessons learned to improve
	disaster planning and response?
	Methods:

The exercise planning process included a review of existing Ob/newborn/neonatal plans, four group planning meetings, targeted specific area meetings and plan revisions. The exercise incorporated scenario-driven, operations-based activities which challenged participants to employ the existing evacuation plans during an emergency. The exercise assessed the following: communication, emergency operation plans, evacuation, patient tracking, supplies and staffing. Evaluators completed an exercise evaluation guide (EEG) based on the MSEL. An after-action report was written based on the information from the EEG, participant feedback forms, hot-wash session, and after-action review meeting.

## **Results:**

Strengths included the meaningful improvement of plans before the exercise and successful evacuation of the unit. Lessons learned included: addressing gaps in effective internal and external communications, adequate supplies of space, staff, and equipment needed for vertical evacuations; and providing staging and alternate care sites with sufficient patient care and electrical-power resources.

## **Conclusions & Health Policy Implications:**

The PDC's exercise demonstrated the ability for the hospital to identify important areas for improvement in planning and response for OB/newborn/maternal units.
